

Content API

What is Deezer Content API ?

Deezer Content API (also called PIPE) gives you access to the Deezer catalog, features and users data, allowing you to build your own music experience within your app.

With PIPE, you can integrate in your app :

- **Content & content pages** for Artists, Albums and Playlists
- **Music search engine**
- Music **recommendations** for users
- **Editorialized content**
- **Charts**
- **Playlists** management
- **User personal library** management
- **User profile** management

Deezer content API is based on **GraphQL** for more flexibility and to be able to define precisely the data you want to display.

GraphQL API allows to retrieve many resources in one HTTP call and then request only the data you need, which is why an understanding of GraphQL queries and mutations is required to interact with Deezer APIs. You can find more information on [Learn GraphQL](#)

How to authenticate to Pipe

To authenticate and consume the Deezer GraphQL API, PIPE, you must generate an access token.

- **Obtain an access token:** Complete the Deezer OAuth 2.0 flow (e.g., authorization code grant) to receive an access token from the authentication server.

Authenticate using the access token you got during the OAuth 2.0 journey and pass it during the POST API call in the Authorization header.

- **Set Up Headers:** In your HTTP request to the GraphQL API, include the access token in the Authorization header, formatted as 'Bearer ACCESS_TOKEN'.

```
Authorization: Bearer ACCESS_TOKEN
```

- **Make Deezer GraphQL API Request:** Send your GraphQL query or mutation in an HTTP POST request to the GraphQL endpoint, with the appropriate headers and body content: <https://pipe.deezer.com/api>

How to write and test your GraphQL queries ?

GraphQL Explorer is Deezer's interactive in-browser tool for writing, validating, and testing GraphQL queries for Deezer APIs.

You can access GraphQL Explorer if you are already a Deezer Partner and you are already logged to the developer portal.

It's accessible via <https://plumbers.deezer.com/playground>
